

**Assignment 4 (10 ptos)**

Due Date: Feb 21st, 23:59pm, BR time.

This is a followup on the third assignment. Using the larger Web collection provided to you, run the indexer program you developed in the previous assignment and produce an inverted lists index.

One additional detail is that the index produced does *\*not\** necessarily fit in main memory. Thus, you will have to modify your code to deal with indices that reside on disk.

Write a report explaining what you have done. Also, provided in a separate file the full vocabulary produced by your indexer program for this larger Web collection.
